

Informed Consent for Eye Health & Wellness Screening

Dr. Flory, committed to providing the best patient care possible, is now offering high resolution Digital Retinal Screening, in the form of photos and OCT scans. These tests should be done at each comprehensive exam, since the health of the eye can change at any time, often without symptoms.

1. Digital Retinal Photos

Digital Retinal Screening Photos provide a permanent documentation of eye disease and establish baseline images to compare against further changes. Both patient and doctor view the images together, providing the best in education and disease management.

2. OCT Eye Health and Wellness Scan

This test is non-invasive and can be performed quickly and easily. These cross-sectional images assist the doctor in identifying very early signs of retinal abnormalities and disease. This unique technology can help detect vision threatening and systemic diseases in their very early stages, when they are most treatable. This exam is recommended annually regardless of symptoms, thereby allowing the doctor to observe changes over time.

Dr. Flory strongly recommends both screenings. They are not covered by your insurance plan.

_____ Yes, I want the Digital Retinal Photos: \$30

_____ Yes, I want the OCT Eye health and Wellness Scan: \$35

_____ Yes, I want both the Retinal Photos and the OCT scan: \$49

_____ No, I do not want Retinal Photos, or the OCT scan
